

Impact Factors identify the frequency with which an average article from a journal is cited in a particular year. You can use this number to evaluate or compare a journal's relative importance to others in the same field or see how frequently articles are cited to determine potential publication targets.

1. To access the Impact Factors database (i.e., Journal Citation Reports), click on “JCR Impact Factors” under “Quick Links” on the Library’s home page.
2. To locate the impact factor of a particular journal, confirm that the “Journals By Rank” tab is highlighted. Type the journal name in the “Go to Journal Profile” box and select the title from the drop down list that appears. That takes you to the “Journal Profile.”

3. The 2016 impact factor for *Stem Cells* is 5.599. That is the average number of times that articles published in *Stem Cells* in the two previous years were cited in a particular year.
