

WHO IS CITING YOUR ARTICLE?

Many researchers are interested in finding out how many times their articles have been cited. There are three different recommendations for resources that track citations: Scopus, Web of Science, and Google Scholar. Each of these resources has advantages and disadvantages, and no single resource will find every citation.

Scopus

Elsevier's multidisciplinary database indexes more than 20,000 journal titles, 45,000 book titles, and 6.5 million conference papers. Citation information is available from 1996 to the present. Use a free personal account to set up a citation alert for each article or for your author profile.

Abstract

Since the 1970s, most of the research and debate regarding interventions for cardiopulmonary arrest have focused on advanced life support (ALS) therapies and early defibrillation strategies. During the past decade, however, international guidelines for cardiopulmonary resuscitation (CPR) have not only emphasized the concept of uninterrupted chest compressions, but also improvements in the timing, rate and quality of those compressions. In essence, it has been a "revolution" in resuscitation medicine in terms of "coming full circle" to the 1960s when basic CPR was first developed. Recent

Google Scholar

A citation count for each article is available in the results list on Google Scholar. This number is not as accurate as the information found in Scopus or Web of Science because it frequently includes duplicate or misidentified citations. Each citing article in the list must be verified by hand. However, Google Scholar will find the most recent citations of a work and will occasionally find misspelled or otherwise inaccurate but still legitimate citations. An email alert for citations can be created with a free Google account.

Google Scholar search results for "wigginton JG". The search bar shows "wigginton JG" and the results are "About 2,070 results (0.04 sec)". The first result is "Recommended Guidelines for Uniform Reporting of Data From Drowning The 'Utstein Style'" by L Papa, PE Pepe, L Quan, D Szpilman, JG Wigginton, et al. The left sidebar has "Create alert" checked and circled in red. A red callout box with white text says: "To set up an alert for author citations, search by author, then click the 'Create alert' link".

Google Scholar search results for "wigginton JG". The search bar shows "wigginton JG" and the results are "About 2,070 results (0.04 sec)". The first result is "Recommended Guidelines for Uniform Reporting of Data From Drowning The 'Utstein Style'". Abstract

Purpose of review

Although longstar

patients with presumed internal hemorrhage, recent experimental and clinical data suggest a more discriminating approach that first considers concurrent head injury, hemodynamic stability, and the presence of potentially uncontrollable hemorrhage (e. g., deep truncal injury) versus a controllable source (e. g., distal extremity wound).

Recent findings

The data suggest that rapid intravenous fluid infusions could be used for patients with isolated extremity, thermal or head injury.
