

# WHO IS CITING YOUR ARTICLE?

Many researchers are interested in finding out how many times their articles have been cited. There are three different recommendations for resources that track citations: Scopus, Web of Science, and Google Scholar. Each of these resources has advantages and disadvantages, and no single resource will find every citation.

## Scopus

Elsevier's multidisciplinary database indexes more than 20,000 journal titles, 45,000 book titles, and 6.5 million conference papers. Citation information is available from 1996 to the present. Use a free personal account to set up a citation alert for each article or for your author profile.

#### Abstract

Since the 1970s, most of the research and debate regarding interventions for cardiopulmonary arrest have focused on advanced life support (ALS) therapies and early defibrillation strategies. During the past decade, however, international guidelines for cardiopulmonary resuscitation (CPR) have not only emphasized the concept of uninterrupted chest compressions, but also improvements in the timing, rate and quality of those compressions. In essence, it has been a "revolution" in resuscitation medicine in terms of "coming full circle" to the 1960s when basic CPR was first developed. Recent

#### Cited by since 1996

### Google Scholar

A citation count for each article is available in the results list on Google Scholar. This number is not as accurate as the information found in Scopus or Web of Science because it frequently includes duplicate or misidentified citations. Each citing article in the list must be verified by hand. However, Google Scholar will find the most recent citations of a work and will occasionally find misspelled or otherwise inaccurate but still legitimate citations. An email alert for citations can be created with a free Google account.

**To set up an alert for author citations, search by author, then click the "Create alert" link**

**To set up an alert for a specific citation, click on "Cited by", then on "Create alert" from the resulting page**

**To set up an alert for a specific citation, click on "Cited by", then on "Create alert" from the resulting page**

### Web of Science

This ISI Thomson Reuters database of multidisciplinary literature indexes over 12,000 journal titles, 30,000 book titles, and 148,000 conferences, including all of their cited references. Use a free personal account to set up a citation email alert for each of your articles to be notified when one is cited.

The screenshot displays the Web of Science interface. At the top, there is a navigation bar with 'Back to Search', 'My Tools', 'Search History', and 'Marked List'. Below this, the search results are shown for 'Author Search Results: 18 Records | 5 Record Sets'. A red callout box points to a 'Create Alert' button, stating: 'To set up an alert for a specific search criteria, click on the "Create Alert" icon here.' The search results list the article 'Intravenous fluid resuscitation for the trauma patient' by Roppolo, Lynn P., Wigginton, Jane G., and Pepe, Paul E. A second red callout box points to the 'Create Citation Alert' button in the 'Citation Network' section, stating: 'To set up an alert for a specific citation, click on its hyperlink, then on "Create Citation Alert"'. The 'Citation Network' section shows '7 Times Cited', '56 Cited References', and 'View Related Records'. The 'All Times Cited Counts' section shows '10 in All Databases', '7 in Web of Science Core Collection', '1 in BIOSIS Citation Index', '3 in Chinese Science Citation Database', '0 in Data Citation Index', and '0 in SciELO Citation Index'.
