

MANAGING YOUR AUTHOR PROFILE

Many article databases with author profiles now automatically calculate and display productivity statistics for each researcher, so it is beneficial to your professional image to be proactive in managing your profile. With so many researchers writing articles, it is sometimes difficult for these article databases to identify which articles belong to you. Your journal articles may be assigned to an author with a similar name or initials, or if you are affiliated with more than one school or organization, the journal article databases may set up separate profiles for each affiliation.

ORCID® provides a persistent digital identifier that distinguishes individual researchers. This ORCID identifier is integrated into some manuscript or grant submissions, researcher systems (such as MyNCBI's SciENcv), institutional repositories, and more. Once you have created your ORCID account, you can link your ORCID identifier to transfer citations from your MyNCBI account, Scopus and ResearcherID (the author identifier used by Clarivate Analytics for Web of Science).

There are three article databases you may consider monitoring: PubMed, Scopus and Web of Science. All of these databases may be reached from the Popular Links list on the Library home page.

PubMed is an important place to manage your articles because it is now connected to eRA Commons. To identify articles as yours:

- Log in to **My NCBI** using your **eRA Commons login**.
- Use PubMed to search for your articles and send them to **My Bibliography**.
- Link your MyNCBI account to your ORCID identifier to send articles to your **My Bibliography** or **SciENcv Biosketches**.

An added benefit to saving your articles to My Bibliography is that it streamlines the process of making your articles compliant with the NIH Public Access Policy. Please use the [Managing NIH Public Access Compliance with My Bibliography](#) and [Linking eRA Commons with My NCBI](#) handouts on the Library website for information. More information on your MyNCBI account can be located in the [MyNCBI Help Manual](#). PubMed does not currently offer author statistics or author profiles.

Scopus has the most detailed author profile system. It uses a computer algorithm to identify which articles belong to you. This means that it tends to set up a separate profile whenever it detects a slight variation in author or affiliation information.

To locate your profile:

- Search for your name under the **Authors** search tab and choose the most likely result from the list.

Author search Compare sources >

To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

About Scopus Author Identifier

The Scopus Author Identifier assigns a unique number to groups of documents written by the same author via an algorithm that matches authorship based on a certain criteria. If a document cannot be confidently matched with an author identifier, it is grouped separately. In this case, you may see more than one entry for the same author.

Web of Science asks authors to manage their Distinct Author Sets themselves through ResearcherID.com. Registering with ResearcherID will give you a unique author identification number that will be used by Clarivate Analytics products to differentiate your publications from those of authors with similar names. Unlike Scopus, which tries to collect information about you automatically, Web of Science wants you to enter information about your affiliation and research areas yourself. You are also asked to manually add your articles to your ResearcherID profile by either searching Web of Science or uploading an EndNote RIS file.

To locate possible author matches:

- Sign up for a ResearcherID account through the **My Tools** drop down link in **Web of Science**.
- Sign in with your ResearcherID login account by clicking on **ResearcherID** under the **My Tools** drop down or by going to [ResearcherID.com](https://www.researcherid.com)

- While logged into your ResearcherID account, click on **My Researcher Profile**.

- There is a tab to **Exchange Data With ORCID**.
- Scroll down to **My Publications: View**.
- Click on **Manage List** to deleted publications and **Add Publications** to search for or upload publication citations.

[Manage List](#)

[Add Publications](#)

This list is to be used for publications that you have authored. You have the ability to make this list public or private. If public, then visitors of ResearcherID can see your scholarly output, and your list will be sent to the *Web of Science* ([click here for more information](#)). Click on the **Manage Profile** button at the top-right corner of the page and select the **Publication Lists** tab to change the privacy settings of your data.

There are three options for adding to your ResearcherID publications list. **Choose Option 1: Web of Science – Search Web of Science Core Collection** to add publications from Web of Science.

Add to: My Publications My Publications: 35

To add publications to your Publication List, select one of the options below by clicking a link.
Note: Depending on your permission to access Web of Science™ and Web of Science™ Core Collection, you will have one or more of the following options:

Option 1:

Web of Science

Search Web of Science

Use this option to search Web of Science. Depending on your subscription, this can include articles, books, patents, and more.

Search Web of Science Core Collection

Use this option to search Web of Science Core Collection. Depending on your subscription, this includes the world's leading scholarly literature in the sciences, social sciences, arts, and humanities and proceedings of international conferences, symposia, seminars, colloquia, workshops, and conventions.

Search Web of Science Core Collection Distinct Author Sets

Use this option to search Web of Science Core Collection for sets of articles written by the same person.

Option 2:

EndNote

Go to EndNote

Use your EndNote account to add articles and manage your ResearcherID publication lists.

Already use EndNote? You can transfer your ResearcherID publication lists between the desktop and web effortlessly. Learn about the additional features available in EndNote to accelerate your research including find full text automatically and access to over 3,700 publishing styles.

Search Online Resources using EndNote

With EndNote, you can collect references from online resources including PubMed and more.

- Help/Tutorials
- Learn more at EndNote.com

Option 3:

Upload RIS file

Upload an RIS file (from EndNote, RefMan or other reference software)

You can upload an RIS formatted text file. The RIS file format is a tagged format for expressing bibliographic citations.

- Enter your last name and first initial.

Add to: My Publications My Publications: 35
